INTRODUCTION

The 1960-1975 Boston General Plan outlined the scope of the housing problems in the city and set forth, in a fifteen-year plan, solutions to these problems. The plan proposes that 37,000 new housing units be constructed during this development period. This includes 5,000 low-income public housing units, 16,000 moderate-income housing units, and 16,000 upper-income housing units. For the moderate income market, the single most effective construction program has been the Section 221(d)(3) of the National Housing Act. Over 7500 of the new units already produced or in planning are a result of this program and many more are anticipated. This construction has provided new homes at moderate rentals for middle-income families and for families relocated through urban redevelopment action. Cooperative sponsorship can result in home ownership in urban areas for many moderate income families. In conjunction with the rent supplement program, 221(d)(3) can be an important source of housing for low income families. That this new housing has fulfilled an important need has been well documented. This publication illustrates with site picutres and identical scale floor plans of typical units (1"=20'), the variety of architectural solutions possible within the cost and design limitations of the program. Comparative data on each development are also included.

221 (d) (3)

Private housing developments constructed under the Section 221(d)(3) Housing Program may be sponsored in three different ways; by a non-profit organization, by a limited dividend corporation, or by non-profit cooperative ownership. The majority of this housing built in Boston has been by non-profit sponsors, although the city is encouraging cooperative participation in order to further urban home ownership.

It is possible for non-profit sponsors to obtain mortgage financing equal to 100 percent of the development cost; for limited dividend corporations this figure is 90 percent. The mortgage period available under this program is 40 years and the interest rate may be three percent. In Boston maximum use has been made of this below market interest rate provision. In addition, non-profit sponsors are free from financial liability in the event of any default affecting the development. The sponsor's role is intended to further social involvement and responsibility in the continuing progress of the community.

FHA has set maximum amounts of the mortgages for these developments which currently range from $8700 for an efficiency apartment to $18650 for three or more bedrooms, although the average cost of a unit in each development is limited to about $17,500 by the Federal National Mortgage Association (FNMA). These limits are approximately 40 percent higher for high-rise elevator apartments. The residents of these units are subject to FHA maximum income limitations, which are periodically adjusted to the cost of living, currently between $5750 a year for a single person to $10650 for a family of seven or more.

To begin a 221(d)(3) development, a prospective sponsor initially contacts FHA with a general proposal. After FHA has approved the sponsorship and certified the proposal the sponsor receives a market interest rate construction loan from an FHA-approved private lending institution. This loan is secured by a 40 year mortgage on the development and the mortgage is, in turn, insured by FHA. When construction has been completed and the final certification by FHA is given, the interest rate on the mortgage is lowered to three percent. The lending institution then sells the mortgage to FNMA, a federal mortgage holding corporation administered by FHA.

Due to the below-market interest rate and the long life of the mortgage, the income necessary to redeem the mortgage is reduced. This, coupled with the limited or non-profit policy, allows for lower rents to the occupants. Developments built under this program have resulted in approximately a 30 percent savings in rents to the residents compared to conventionally financed housing.
